Nam draws a tree in a paper (Note: *tree* here is a single connected acyclic graph in Graph theory, not *tree* in reality). The tree consists of **N** nodes. Nam want to makes his tree more beautiful. Therefore, he decided to coloring all **N** nodes.

Nam numbering nodes from 1 to **N** for convinient. He firstly color node 1. Then he will color **N** - 1 remaining nodes, in any order which satisfied condition: node are chosen to color must be adjacent to one of nodes colored before. Two nodes are consider adjacent if there is a direct edge between them.

Nam wondering, how many ways of coloring the tree he possible make. Two ways are consider different if order of coloring nodes in 2 ways are different, because Nam uses only 1 color.

## Input

The first line is **T** - the number of test cases. Then **T** test cases follow.

Each test consists of several lines.

- The first line is **N** - the number of nodes in tree.
- Then the next **N** - 1 lines, each line contains 2 integer **u** and **v** ( $1 \leq u, v \leq N$ ), denoting there is a direct edge between node **u** and node **v**. It is guaranteed that these edges form a tree.

## Output

For each test, print the number of ways coloring the tree in a single line. Since this number can very large, you must print it modulo  $10^9 + 7$ .

## Constraints

- $1 \leq T \leq 10$
- $1 \leq N \leq 100000$

## Sample Input [\(Plaintext Link\)](#)

```
3
3
1 2
2 3
3
1 2
1 3
4
1 2
2 3
```

1 4

**Sample Output** ([Plaintext Link](#))1  
2  
3**Explanation**

In the first test, there is only 1 order of coloring the tree, that is (1, 2, 3). In the second test, there are 2 orders of coloring the tree, they are (1, 2, 3) and (1, 3, 2). In the third test, there are 3 orders of coloring the tree, they are (1, 2, 3, 4), (1, 2, 4, 3) and (1, 4, 2, 3).

Time Limit: 2 sec(s) for each input file.

Memory Limit: 256 MB

Source Limit: 1024 KB

Marking Scheme: Marks are awarded if any testcase passes.

Allowed languages: C, CPP, CLOJURE, CSHARP, GO, HASKELL, JAVA, JAVASCRIPT, JAVASCRIPT\_NODE, LISP, OBJECTIVEC, PASCAL, PERL, PHP, PYTHON, RUBY, R, RUST, SCALA
